

MACLENNAN HYDROSUMP PRO

DESCRIPTION

Two versions of the MacleNNan HydroSump Pro Packaged Sump Systems are available:

- HydroSump Pro White

Specialist Pump System for use with MacleNNan HydroDrain

- HydroSump Pro Green

General Pump System for the pumping of surface water from light wells, ACO drains etc.

HydroSump Pro Highlights:

- Choice of pumps to suit all applications
- All internal pipe work supplied terminating in 50mm or 63mm socket ready for discharge pipe
- One-way valve for each pump included
- Two quick release couplings per pump for easy installation and removal for servicing
- Adjustable neck ensures that the lid is always at the correct height regardless of floor finishes
- MacleNNan HWLA High Water Level Alarm included
- Double sealed lockable lid supplied with all three models
- Flat areas to side of chamber ready for wall flanges to receive incoming services of 63mm, 110mm or 160mm
- Large foot to base of chamber to prevent flotation
- Anti-Drip system available for the inside of the chamber
- Anti-Smell system available for when the sump is receiving water from washing machines, sinks or dishwashers
- Wet-Install kit available that includes pressure release valves and tremie pipe for installations where water is entering the excavation

The HydroSump Pro White Packaged Sump System is designed specifically to be used with MacleNNan HydroDrain.

The adjustable neck allows for the sump to be installed at a fixed height relative to the slab so that the connection in from the MacleNNan drainage system and the pump discharge line are made above the concrete.

The sump can be used with single pumps, twin pumps and twin pumps with twin discharge lines for greater pump efficiency.

The unique sump shape together with a choice of inlet and outlet positions allow for connections in and out of the chamber to be made to either a side wall or to a corner.
